## ESOL Choice Board for Grades 6-8

Monday Tu	esday	Wednesday	Thursday	Friday
A ratio is a number that compares values. A golden ratio is a special ratio. In the golden ratio, a whole is broken into two unequal parts where the whole number divided by the larger part equals the larger part divided by the smaller part.	<u>Click here</u> to learn more about the Golden ratio (also called the "Golden section" or "golden mean") Can you draw a rectangle using the Golden Ratio? <u>Click here</u> to follow along with a how-to video (you may	<u>Click here</u> to read an article about the Golden Ratio. Can you identify 2 facts in this article? Remember, facts are statements that can be proven. Write them here, and explain how you could prove the facts you have identified:	English has many multiple- meaning words (also called homographs) that are written the same way but mean more than one thing. We have to use	After you read Wednesday's article, can you use the word bank to fill in the blanks on this paragraph that explains the relationship between math and nature in the text? originally noticed the pattern that would later be known as the golden ratio in nature, converting this natural occurrence into a and eventually a number In other words, while
This ratio is commonly found in nature, and when used in design, it fosters organic and natural looking products that are beautiful to look at.	want to grab some graph paper for a super- accurate drawing).
